

## EDITORIAL

**Sunbeds: An international common concern**

Skin cancer is of great importance for the people and the health-care systems in Europe. The signing authorities, societies and associations support this special edition on the impact of the use of sunbeds on skin cancer. They welcome the fact that dermatologists and researchers have taken up this topic and provide a comprehensive view on the current state of scientific knowledge in articles worth reading. For the future, too, it is important to publicly address the dangers of overusing sunbeds and to name the associated risks for developing skin cancer. We share this concern and thank all authors for their contributions, highlighting the need for early and effective skin cancer prevention across Europe.
